

Flydubai prepares for record-breaking summer

A Monitor Report

Date: 01 July, 2022

Dubai : flydubai, the Dubai-based airline, is preparing for a record-breaking summer, building on the momentum from the performance in the first quarter of 2022 and the surge in demand for travel.

The carrier is gearing up to welcome three million passengers over the busiest summer in the airline's history.

Over the summer period, an average of 8,500 departures per month are scheduled across flydubai's network of 102 destinations, which exceeds pre-pandemic levels.

On this note, Ghaith Al Ghaith, Chief Executive Officer, flydubai, said, "While the global aviation sector has been slowly recovering from the repercussions of the pandemic, we have seen Dubai steadfast in its approach to enable the return to free flows of trade and tourism. The decisions made early on in the pandemic have enabled us to ramp up our operations to cater to the pent-up demand in record time. This would not have been possible without the hard work of our people, the collaborative approach taken by the key stakeholders in the UAE and the confidence our passengers have in our operations."

flydubai's flights to more than 30 destinations, which were temporarily operating out of Dubai World Central (DWC), returned to operate from Dubai International (DXB) from June 23.

This follows the successful completion of the 45-day period Northern Runway Rehabilitation programme at DXB.

Between May 9 and June 22, the carrier has minimised disruption to its passengers by operating out of both airports.
