

Turkish Airlines signs agreement with Sabre to accelerate regional growth

- A Monitor Desk Report

Date: 30 June, 2025

Dhaka: Sabre Corporation, a global technology provider to the travel and tourism industry, signed a new technology agreement with Turkey's leading passenger air carrier, Turkish Airlines, to provide its AirCentre Flight Plan Manager solution to streamline the airline's operations.

In addition, the airline will be moving from its current flight tracking system to adopt Sabre's Flight Explorer within the scope of this agreement.

Since the start of this agreement, Sabre has worked closely with Turkish Airlines to implement AirCentre Flight Plan Manager to provide vital cost savings and support key flight planning decisions.

Under the new agreement, the solution will provide a significant support for strengthening the flag carrier's position within the regions it serves.

Sabre Flight Plan Manager brings together real time information on a number of key variables—including weather, air space restrictions, aircraft performance, and schedule information—and then calculates the most optimal flight route relative to these variables.

This automation supports flight planning decision-making across all operations, enabling airlines like Turkish to address key ongoing concerns, such as fuel efficiency and CO2 emissions.

Globally, Sabre's technology is used by 225 airlines, including most of the world's largest carriers.
