

## DXB tops in ACI's connectivity index

- A Monitor Desk Report

Date: 29 May, 2025

Dhaka: Dubai International Airport (DXB) has maintained its position as the leading airport in the Airports Council International's (ACI) 2024 Air Connectivity Rankings for the Asia-Pacific and Middle East regions, according to state news agency.

Paul Griffiths, CEO of Dubai Airports, said that, "Connectivity is the cornerstone of relevance in global aviation, and we are pleased to see Dubai International (DXB) once again acknowledged as the region's leading hub in ACI's 2024 Air Connectivity Ranking."

"What sets DXB apart is not only the scale of our network, but the consistency and quality of the connections the airport provides."

The airport currently serves more than 265 destinations across six continents, reinforcing its contribution to global trade, tourism, and the creation of sustainable economic opportunities.

“But connectivity at this level only matters if it is delivered with precision. Our strength lies in combining reach with efficiency, ensuring fast, seamless and secure journeys for tens of millions of guests each year,” he added.

Griffiths continued, “This recognition reflects the oneDXB spirit - a shared commitment of our airline partners, the broader airport community and the city of Dubai.

Together, we are shaping a model of airport connectivity that is agile, guest-focused and economically significant, not just for the region but for the world.”
